PHYSICAL ACCESS CONTROL

SECURE DIGITAL IDENTITIES FOR PHYSICAL ACCESS CONTROL USING MOBILE DEVICES

- Portable Proven model manages the transmission of secure identity data over-the-air to mobile devices.
- Superior Protection Ensure privacy, security and integrity of identity data by leveraging Secure Identity Object[®] (SIO[®]) data encoding.
- Easy to Manage Seamless lifecycle management of Mobile IDs (creation, distribution, revocation) simplifies deployment and administration.

HID Mobile Access® enables mobile phones to be used across the organization just like a card or other form factor to seamlessly increase employee productivity while "on-the-go." The move to mobile and a bring your own device (BYOD) environment has IT departments increasingly concerned about securing access and protecting company data. It is essential that the protection of identity data follow stringent policies to prevent a security breach in the enterprise.

HID Global's Mobile IDs are the vehicle to protect identity data for various applications. With a primary focus on the access control market, Mobile IDs offer a privacy-preserving model to protect personal identification data from unauthorized access.

Provisioned over-the-air to the end-user device, Mobile IDs are based on industry standard technology. Seos® technology keeps identity data secure during the lifecycle of the Mobile ID. Versatile by design, Mobile IDs can also be assigned with comprehensive policies to comply with the majority of customer requirements.

Fully integrated into the iCLASS SE[®] platform, Mobile IDs provide a trusted and adaptable model that leverages the platform's Secure Identity Object[®] (SIO[®]) data model for multi-layered security. Mobile IDs are based on cryptographicallyprotected data objects with state-ofthe-art cryptographic protocol and algorithms. These portable data objects are distributed from device to device using the secure protocol Seos provides. This ensures end-to-end protection between the device and reader, regardless of the underlying communications standard.

SPECIFICATIONS

HID MOBILE ACCESS*
Performance-oriented data footprint: 300-400 bytes for each Mobile ID
Data Binding capability to the user's device
Loadable in the device memory (tamper-proof data storage)
Device-agnostic design: Portable to any mobile device capable of running the Seos* software application
Operating System independent: Android™ and iOS* (or other mobile OS in the future)
Communications standard-independent: Bluetooth Smart and NFC
Provisioned through the Seos Trusted Services Manager (TSM) into registered mobile devices
Issue and revoke Mobile IDs via the Secure HID Identity Services portal (enterprise setup required)
SEOS APPLICATION
Lightweight application providing secure messaging and strong authentication services to distribute Mobile IDs
Mutual authentication protocol with generation of diversified session key to protect each card session
Protect over-the-air data communication with data confidentiality and integrity
SECURITY FEATURES
Cryptographically-protected data object that leverages SIO* data model and security
Cryptographic Key Management Policy: SE ELITE protection with different keys depending where mobile key resides (software- or hardware-based secure element)
Privacy-enhanced model to avoid revealing identity data (ex: via sniffing method)
INTEROPERABILITY
Supports iCLASS SE* and multiCLASS SE* Readers that can process SIO*-enabled data formats Supports iCLASS SE readers with firmware Revision E or later

New mobile-enabled iCLASS SE readers shipped from HID Global distribution centers.
